About the Silhouette Cameo 4 vinyl cutter

We have a <u>Silhouette Cameo 4</u> vinyl cutter which can also operate as a pen plotter (although in a more limited fashion).

There is no cost to using the vinyl cutter, blades and a selection of vinyl colours are provided, with matt black and matt white being kept in stock most of the time.

The machine can be used by creating a vector drawing in software like Adobe Illustrator, CorelDRAW, Affinity Designer, or Inkscape. The file is then saved as a `.dxf` format file which can be loaded with the free <u>Silhouette Studio</u> software.

There is also a license for <u>Silhouette CONNECT</u> software available to enable direct cutting from Adobe Illustrator or CorelDRAW if necessary.
