

About

The CCI technical team runs a program of technical skills workshops focused on developing essential skills for working in the CCI. These cover various practical topics, including electronics, fabrication, networking, server programming and more.

Workshops are currently every **Wednesday, 2-4pm, in PR-B501-02**. The subject of each weeks' workshop is announced on Mondays, in the [#technical](#) channel on Slack and on the noticeboard by the lifts in Peckham Road. Each workshop is walk-in (no registration required), and doesn't depend on coming to any of the other workshops. All students and staff are welcome. **These workshops are now being recorded and are available on Panopto [here](#).**

If you would like to suggest a future workshop (or suggest someone you think should run one) you can do so using [this form](#). The *only* way to acquire a sticker is to attend a workshop :)

Revision #14
