

Exploration Workshops

We are experimenting with running a series of more advanced 'exploration workshops' alongside the tech skills workshops, which use sound as a basis for developing creative coding and physical computing skills.

Exploration workshops run in **Peckham Road**, once every 2 weeks, on Monday nights. The sessions include regular meetings of the **Circuit Diagram Reading Group** (CDRG), a regular session that focusses on building synthesisers from scratch, and one-off sessions on skills including **live coding** and **DIY radio**. In all sessions, attendees will use computers and/or electronics to produce *new sounds*, exploring hardware and software for audio and performance.

Sessions involving hardware (e.g. the CDRG and radio workshops) are limited to 25 attendees, and require a signup to guarantee a space, as they require components and resources to take place. Other sessions, such as the live coding workshop, are more flexible.
